

Wärtsilä

Shaping the decarbonisation of marine and energy
Roadshow presentation

December 2025

Wärtsilä – Shaping the decarbonisation of marine and energy

As of 1 April 2025, Wärtsilä has three reporting segments: Wärtsilä Marine, Wärtsilä Energy, and Wärtsilä Energy Storage. Portfolio Business continues to be reported as other business activities.

Wärtsilä Marine

Marine offers engines, propulsion systems, hybrid technologies and integrated power transmission systems and related services that support our customers in moving towards carbon neutrality.

Wärtsilä Energy

Energy offers flexible, efficient, and reliable power plants and services for balancing and baseload applications in the changing energy landscape – enabling 100% renewable energy systems.

Wärtsilä Energy Storage

Energy Storage offers hardware, software, and lifecycle solutions that unlock more efficient and optimised power systems.

Net sales by business, LTM Q3/2025

Committed to financial targets

Marine and Energy, combined financial targets

- 5% annual organic growth
- 14% operating margin

Energy Storage, financial targets

- Low double-digit annual organic growth
- 3-5% operating margin

Group, financial targets

- Gearing below 0.5
- Distribute a dividend of at least 50% of earnings

Strong track record in innovations – ~4% of net sales on R&D yearly

Market fundamentals

Decarbonisation is shaping the marine industry

POLICIES AND REGULATIONS

- IMO¹ target: to reach net zero greenhouse gas emissions from international shipping by or around 2050
- Cost of carbon emissions: EU Fit for 55, IMO global fuel standard, and local green policies
- Access to capital: EU taxonomy, Poseidon Principles and ESG
- Demand for green sea transport: a growing market driven by corporate carbon reduction pledges

TECHNOLOGY

- Focus on carbon-neutral and zero-carbon fuels. The switch to these fuels will be progressive
- Next steps in abatement technologies, e.g. maritime carbon capture
- Increase in battery systems, hybrid solutions, and energy-saving technologies
- Focus on fuel flexibility and upgradeability to increase overall efficiency

CONNECTIVITY AND DATA

- Optimisation solutions based on a holistic view of the entire transport system
- Performance-based service agreements with a focus on uptime, reliability, and fuel efficiency
- Vessels are data pools, and are becoming increasingly complex
- Cyber security growing in importance

1) International Maritime Organization

Energy is moving towards a 100% renewable energy future

POLICIES AND REGULATIONS

- EU: Climate-neutral by 2050
- China: Carbon neutral by 2060
- Countries with net zero targets cover 88% of global emissions

TECHNOLOGY

- Electricity generation would need to grow by almost 3x, and renewables by 8x to reach Net Zero targets by 2050 (Source: IEA World Energy Outlook 2024)
- Renewables are becoming the main source of electricity and are the cheapest form of generating power
- Intermittent energy sources requiring balancing solutions
- Sustainable fuels for balancing power

CONNECTIVITY AND DATA

- Digitalisation creates opportunities for optimising energy use and costs
- Power systems becoming increasingly complex with different types of generation assets
- Cyber security growing in importance

Our value creation potential is based on two strategic themes

Transform

Attractive growth opportunities in the decarbonisation transformation

Perform

Clear path for operational improvements and increased profitability

Marine and Energy continue to execute earlier communicated strategies with a clear path to reach the updated financial targets

Transform

- **Industry-leading technology portfolio**
- **Market leader in:**
 - 4-stroke medium speed main engines
 - Engine power plants
- **Technology leader** in green fuels
- **Pioneer** in marine carbon capture & storage
- **~25% growth in services** since 2022
- **All-time high order book** at the end of 2024 (~€5.7bn)

Perform

- **Services >60% of net sales in 2024**, moving up the service value ladder with book-to-bill ratio well above one
- **Strong focus on quality of revenues**
 - Improving newbuild order margins
 - Energy's focus on equipment deliveries instead of EPC
- **Improving capacity utilisation**
- **Addressing footprint and cost structure wherever and whenever needed**
- **Limited additional capex needed to facilitate profitable growth**
- **Focus on continuous improvement**

5%

Annual organic growth

14%

Operating margin

Energy Storage continues to focus on selective profitable growth

Transform

- **Selective commercial approach focusing on our strengths:**
 - Excellence in project execution
 - Industry-leading solution performance and thermal safety
 - GEMS¹ for optimised energy management of a single installation, fleets and microgrids
- **Multisourcing implemented** for key components, ability to provide a product not made in China
- **Growth in recurring revenue** through long-term service agreements, enabled by GEMS¹
- **Continuous improvement** of modularised hardware & software to create customer value

Perform

- **Strong focus on quality of revenues**
 - Industry-leading project delivery & execution capabilities
 - Strong risk management, focus on equipment delivery
 - Selective market expansion to new geographies (related investments expected to burden short-term profitability)
 - Diversified supplier base
- **Addressing cost structure** wherever and whenever needed
- **Capital-light business** with positive cash flow
- **Project business** with volatility in revenues and operating margin

Low double-digit

Annual organic growth

3-5%

Operating margin

1) GEMS software platform

Strong market fundamentals and the decarbonisation transformation will support profitable growth in Marine business

Annual equipment contracting of 4-stroke medium speed main engine-powered units (GW)¹⁾, CAGR

- **Contracting in Wärtsilä's key segments is expected to remain clearly above the 10-year average level**, with latest forecast indicating a 36% increase in contracting volumes by 2030
- **The IMO target of reaching net-zero GHG emissions by 2050 remains intact**, despite the decision to delay the vote on adoption of the Net-Zero Framework by one year
- **The decarbonisation of shipping continues to progress**, driven by local regulations e.g. in the EU and a wide range of customers' decarbonisation strategies
- **In the EU**, regulatory landscape will **double fuel costs** up to 2030²⁾
- Switch to **carbon neutral and zero carbon** fuels will be **progressive**, reaching net-zero emissions will require a **fundamental shift towards sustainable fuels and abatement solutions**

1) Source: Clarksons September 2025 forecast "Base Case" scenario, excludes navy; 2) assuming 100% of fuel consumption subject to Fit for 55 regulations and VSLFO price at 550 EUR/ton, EU allowances price from EUR 65/ton in 2024 to EUR 129/ton in 2030

The increasing share of renewables and need for balancing power will support the demand for Wärtsilä's Energy and Energy Storage offering

- **Thermal balancing** market is **expected to grow +4X by 2030** driven by accelerating intermittent baseload. US is an important market for thermal balancing
- Power generation related **regulatory changes support uptake of thermal balancing** (US Federal and State bills, EU electricity market reform and China market reform)
- **Flexible engine power plants balance grids in an affordable and sustainable way**, also for longer shortages in intermittent renewable generation. Sustainable fuels used for balancing can fully decarbonise power systems in the future.
- **Energy storage systems are essential for near-instantaneous flexibility** and short-duration energy shifting

1) Wärtsilä Engine Power Plants theme call for investors 12/2024, base year updated with 2024 data in Autumn 2025. Sources: BNEF, Wärtsilä estimates; 2) Wärtsilä Energy Storage theme call for investors 4/2025. Estimated from BNEF energy storage market outlook. Addressable market excluding certain geographical markets and residential & commercial storage. Sources: BNEF, S&P Global and Wärtsilä estimates

Service has provided resilient sales and profits for Wärtsilä over decades

Service Net Sales, MEUR¹⁾

>€3.4bn

service net sales in 2024 with good future growth potential

~30%

of installed base covered by service agreement at the end of 2024

>90%

LTM renewal rate of existing service contracts in 2024

1) Service net sales as reported in Annual Reports 2000-2024. 2000–2018 service was reported as its own division and from 2019 onwards as a part of the other reporting segments. Figures reflect the data as per the organisation structure at each point in time and is not adjusted for changes such as acquisitions

We continue to execute our services strategy on all steps of the service value ladder

- Our installed base of medium speed engines is increasing
- ~30% of installed base²⁾ is under service agreements with further growth potential
- Moving up the service value ladder – agreements and performance-based agreements have 2-5X spend ratio (EUR/kW) relative to transactional services
- Total investments in Marine retrofits, including Carbon Capture and Storage solutions (CCS), are estimated to increase significantly over the next decade³⁾

1) Customer spend ratio EUR/kW 2) 4-stroke engine MW 3) Source: Clarksons

We continue to actively manage our business portfolio

Divestments in 2025

Automation, Navigation & Control Systems

- In December 2024, Wärtsilä announced that it had agreed to divest its Automation, Navigation and Control Systems (ANCS) business to the Swedish investment company Solix Group AB.
- The transaction was completed on 1 July 2025.

Marine Electrical Systems

- In July 2025, Wärtsilä announced that it had agreed to divest its Marine Electrical Systems business to Vinci Energies.
- The transaction was completed on 31 October 2025.

Gas Solutions

- In December 2025, Wärtsilä announced that it had agreed to divest its Gas Solutions business to Mutares SE & Co. KGaA.
- Subject to approvals, the transaction is expected to be completed in the second quarter of 2026.

Portfolio Business to continue divestments

- Bernd Bertram appointed as Head of Portfolio Business reporting to CEO but not being part of the Board of Management
- After the divestment of Gas Solutions (closing expected in Q2/2026) only **Water and Waste** (annual sales approximately EUR 50 million) remains in Portfolio business.

Solid progress towards financial targets in Marine and Energy combined

- Gearing below 0.5
- Distribute a dividend of at least 50% of earnings

*In 2022, dividend was paid despite negative EPS

Profitability drivers

+

Supporting drivers

- Continued decarbonisation in both the energy and marine markets
- Renewables is the cheapest way to generate electricity
- Growing service business
- Strong and long order book both in new equipment and services
- Improved capacity utilisation
- Continuous improvement

+

/

-

Uncertainties

- Geopolitical tensions
- Tariffs and trade restrictions
- Recession risk

-

Negative factors

- Negative mix impact from increasing equipment deliveries
- Investments in new markets in Energy Storage

The strategic priorities are the key levers to improve our performance and reach our target position

1

Excel in creating customer value

We continuously evolve our understanding of, and responsiveness to, our customers to make them successful

2

Develop high performing teams that make a difference

We attract high performing people and excite diverse teams that excel in continuous learning and collaboration. Our leaders provide direction and support, empowering people to act

3

Drive decarbonisation in marine and energy

We accelerate decarbonisation in marine and energy through innovation, focused investments and selective partnerships, while also decarbonising our own operations. We provide optimisation solutions and are a thought leader in our industries

4

Capture growth in services

We excel in transactional and retrofit business. We move up the service value ladder by growing in performance-based agreements

5

Continuously improve our end-to-end value chain

We continuously improve our end-to-end business to meet customer expectations on quality, lead time and delivery accuracy, while reducing complexity and improving competitiveness. We leverage digitalisation throughout our value chain

Marine highlights

Leading the path towards decarbonisation by developing state-of-the-art tech and enabling adoption of clean fuels

Wärtsilä Marine – Key figures LTM Q3/2025

Order intake
3,856 MEUR

Net sales
3,405 MEUR

Comparable operating result
421 MEUR
12.4% of net sales

Share of total net sales LTM Q3/2025

Marine net sales split LTM Q3/2025

* Financial figures for 2023 have been restated to reflect the redefined organisational structure after discontinuation of Marine Systems as a reporting segment as of 1 January 2024. Exhaust Treatment and Shaft Line Solutions business units were moved from Marine Systems to Marine Power and consequently, Marine Power changed its name to Wärtsilä Marine as of 1 January, 2024.

Offering

- Multi-fuel 4-stroke engines
- Propulsion systems
- Catalyst systems
- Fuel gas supply systems
- Hybrid and electrification solutions
- Voyage and fleet optimisation
- Exhaust treatment
- Shaft line solutions
- Services
 - Spare parts and maintenance services
 - Performance based agreements
 - Retrofits and upgrades

Key customer segments

- ❖ Cruise & ferry
- ❖ Offshore
- ❖ Merchant
- ❖ Other segments:
 - Special vessels
 - Gas carriers
 - Navy

Decarbonisation can be reached through different pathways; net-zero targets will require a fundamental shift towards sustainable fuels

Decarbonisation pathways

Burn less fuel ¹⁾		Clean up emissions ¹⁾	Use alternative energy sources	
Vessel efficiency	Operational efficiency	Emission abatement	Sustainable fuels	Electrification
<ul style="list-style-type: none"> ▪ Reduction of GHG emissions and fuel cost ▪ E.g., energy efficiency improvement of engine, propulsion, hull, other systems 	<ul style="list-style-type: none"> ▪ Reduction of GHG emissions and fuel cost ▪ E.g., speed reduction, route optimisation, onboard energy management 	<ul style="list-style-type: none"> ▪ Significant reduction of GHG emissions through onboard carbon capture, regardless of the fuel ▪ CO2 offloading infrastructure, onboard storage and value chain needed 	<ul style="list-style-type: none"> ▪ Significant / total reduction of GHG emissions ▪ Technology available; infrastructure and supply under development 	<ul style="list-style-type: none"> ▪ Zero GHG emissions through battery-electric propulsion ▪ Viable on short ranges due to low energy density
Approximate greenhouse gas (GHG) emission reduction potential				
25%	25%	70%	100%	100%

1) These pathways shall be combined with the utilisation of alternative fuels to support long term IMO targets

A progressive switch to sustainable fuels is already under way

Sustainable fuel uptake scenario for net-zero in 2050¹⁾

Total energy consumption, EJ

- ✓ **Fuel transition is under way:** ~50% of tonnage on orderbook is set to use alternative fuels; long-term fuel mix is dependent on supply of different fuels
- ✓ **LNG is still #1 alternative fuel.** Methanol and ammonia will pick up in the longer run
- ✓ **Hybrids, batteries, ESTs³⁾ are growing:**
 - ~238 hybrid / full-electric 2 000+ GT vessels were ordered in 2024 (compared to 120 in 2022 and 60 in 2019)

1) Source: DNV Maritime Forecast 2050; 2) HFO – Heavy Fuel Oil; LSFO – Low Sulphur Fuel Oil; MGO – Marine Gas Oil; MDO – Marine Diesel Oil; 3) Energy Saving Technology

The regulatory changes impact maritime now: half of the total shipbuilding orderbook can run on alternative fuels

2024 saw the highest-ever alternative fuel capable vessel ordering, excluding gas carriers

Alternative fuels uptake

~50%
of the orderbook is
alternative fuel capable

~48%
vessel GT ordered by
Q3/2025 was alternative fuel
capable

1) Source: Clarksons Research, October 2025; other includes ammonia, nuclear, nuclear, ethane, hydrogen, biofuels, fuel cells and battery/hybrid

Cost of emissions will close the price gap between fossil and sustainable fuels; fuel selection impacts the vessel structure

Fuel type	Low Sulphur Fuel Oil @ 20°C	Liquified Natural Gas @ -162°C	Methanol @ 20°C	Ammonia @ -33°C	Liquid Hydrogen @ -253°C	Compressed Hydrogen @ 350bar	Marine Battery Rack
Fuel price factor (per GJ) ¹⁾	1x	1.1x - 4.6x ²⁾	2.6x - 5.5x ³⁾	2.4x - 4.3x ⁴⁾	3.6x - 4.6x ⁴⁾	2.1x - 3.1x ⁴⁾	2.0x - 5.3x ⁸⁾
Fuel price factor in 2035, incl. carbon tax ^{1) 5)}	1x	0.8x - 1.4 ²⁾	0.8x - 1.6x ³⁾	0.7x - 1.2x ⁴⁾	1.2x - 1.5x ⁴⁾	0.6x - 1.0x ⁴⁾	0.8x - 2.0x ⁸⁾
Gross tank size factor ⁶⁾	1x	1.7x - 2.4x ⁷⁾	1.7x	3.9x	7.3x	19.5x	~40x (~20x potential)

1) Fuel production cost estimate for 2025 and 2035; source: Maersk Mc-Kinney Møller Center for Zero Carbon Shipping – NavigaTE 2023; 2) Price range spans between fossil & electro- methane; 3) Price range spans between bio- & electro- methanol; 4) Price range spans between blue- & electro- ammonia/hydrogen; 5) Assuming 100% consumption subject to EU Fit-for-55, EU allowances at EUR 159/ton (source: Transport & Environment NGO); 6) Gross tank estimations based on Wärtsilä data; 7) 1.7x membrane tanks, 2.4x type C tanks; 8) Shore energy price EUR 0.1-0.27/kWh

The alternative fuel ecosystem must continue to develop further to support the maritime green transition

Engine technology

- Technology is readily available, with ~50% of the current vessel orderbook set to run on alternative fuels
- Wärtsilä leads in fuel flexibility and efficiency, having the industry's most comprehensive offering:

Wärtsilä's alternative fuel roadmap

Availability of fuels

- Alternative fuels are not yet available at the required scale
- Production is estimated to pick up, with planned capacity of sustainable methanol and ammonia reaching ~190 Mt by 2030¹⁾:

Production of sust. methanol and ammonia, Mt

Port infrastructure

- Bunkering infrastructure is limited but developing rapidly; carbon capture and storage infrastructure is still lacking
- ~60% of the top 50 ports worldwide either have or are planning to have alternative fuel bunkering³⁾:

Alternative fuels bunkering in top 50 ports, no. ports

1) Source: DNV AFI, 2) Global fleet would require an estimated ~600Mt of fuel to run solely on ammonia and methanol due to their lower energy content, 3) Source: Clarksons

Our engines have built-in upgradability to future fuels, with significant part commonality between different fuel versions and a modular design

LNG DF ¹⁾ engine to run on:	Fuel System	Engine base	Engine top
▪ Bio/Synthetic diesel	▪ No changes	▪ No changes	▪ No changes
▪ Bio/Blue/Green methane	▪ No changes	▪ No changes	▪ No changes
▪ Ammonia	▪ Replace with AmmoniaPac	▪ No changes	▪ Change fuel injection system and power pack ²⁾
▪ Methanol	▪ Replace with MethanolPac	▪ No changes	▪ Change fuel injection system and power pack ²⁾
▪ Hydrogen blend ³⁾	▪ Move to alternative fuel handling system	▪ No changes	▪ No changes

↓

Replacement of fuel handling and storage system has bigger impact in terms of CapEx, cargo space and vessel range

Upgrading a multi-fuel engine to a new fuel requires limited investment thanks to high modularity and part commonality

1) DF – Dual Fuel; 2) I.e., piston, cylinder liner, connecting rod; 3) Up to 15% on fuel volume

Our market share is stronger on alternative fuel capable engines compared to diesel engines

4-stroke medium speed main engines market share¹⁾

Auxiliary engines market share¹⁾

We are **market leaders** in 4-stroke medium speed main engines, and particularly strong in high-value segments and sustainable fuels

We are **growing** in auxiliary engines, as sustainable fuels are de-commoditising and consolidating the market

● Outer circle: Wärtsilä total market share

● Inner circle: Wärtsilä market share on alternative fuel engines

1) Wärtsilä estimates, MW; 2) Average 2024-2028, based on Clarksons March 2024 forecasts and internal models

Source: Marine theme call, May 2024

We focus on the most high-value, performance-driven segments

Typical Wärtsilä Marine offering per vessel¹⁾

	Cruise	Ferries	Offshore	Navy	Specials ⁶⁾	Merchant	Hy-El merchant
							
Engines / Hybrid¹⁾	Diesel-Electric	Main Engines Aux Engines Hybrid System	Hybrid-Electric	Aux Engines	Main Engines	Aux Engines Main Engines ⁵⁾	Hybrid-Electric
Propulsion²⁾	Tunnel Thrusters	CPP or Waterjets	Steerable Thrusters Tunnel Thrusters	CPP, FPP or Waterjets	CPP or Steerable Thrusters Tunnel Thrusters	CPP Tunnel Thrusters EST	CPP Tunnel Thrusters EST
Potential³⁾	15-40 MEUR	10-25 MEUR	5-15 MEUR	5-15 MEUR	5-15 MEUR	2-15 MEUR	25-30 MEUR
% of Order Intake⁴⁾	~25%		~5%	~10%	~5%	~50%	-

1) Non-exhaustive list; offering depends on vessel specific configuration and may vary substantially. 2) CPP/FPP = Controllable/Fixed Pitch Propeller; EST = Energy Saving Technology, e.g., gate rudder, EnergoProFin, EnergoFlow, EnergoPac; 3) Potential per shipset; it includes catalyst systems and electrical systems; carbon capture is not included, and could unlock additional 2-8 MEUR potential; 4) Marine equipment order intake, 2023; ~5% in non-vessel markets, mainly simulation and ports; 2-stroke cargo order intake mainly from LNG carriers and containerships; 5) Predominantly 2-stroke main engines, 4-stroke main engines only on small vessels and coastal vessels 6) Dredgers, fishing vessels, inland vessels, tugs and service vessels, such as icebreakers

Recovery in our key target segments is growing the 4-stroke medium speed main engine addressable market

Annual equipment contracting of 4-stroke medium speed main engine-powered units (MW)¹⁾

1) Clarksons September 2025 forecast "Base Case" scenario 2) Fishing, dredgers, support units, yachts, tugs, etc.; navy is excluded

We have a strong position in Cruise, Ferry, and Offshore segments

Global cruise travelling is forecast to grow by 21% from 2024 to 2028

Cruise passengers, million passengers

First-time cruisers in past two years, million passengers

Source: CLIA, the state of the cruise industry 2025

- ✓ Global cruise traveling increased by 9% year-over-year in 2024 with 34.6 million passengers sailing
- ✓ By 2028, cruise is forecast to grow to nearly 42 million passengers (+21% vs 2024)
- ✓ Cruise is attracting an increasing number of first-time cruisers
- ✓ 60% of ships with delivery between 2023 and 2028 are set to run on LNG fuel
- ✓ Methanol is gaining traction, e.g., Celebrity Cruises new Edge Series ship will be equipped with Wärtsilä 46F methanol-ready engines

Vessel contracting forecast

No of ships, 2,000+ dwt/GT, ship-shaped mobile offshore vessels only¹⁾

1) Source: Clarksons Research, September 2025

Global shipyard capacity is currently at ~75% of previous peak, but is expected to increase to ~90% by 2030

Capacity increases are expected especially in China

Development of global shipyard capacity

Regional shipyard capacity as % of 2011-12 peak, CGT¹⁾

Distribution of current shipyard capacity

1) Source: Clarksons Research, September 2025, shipyard capacity measured in CGT, Compensated Gross Tonnage.

Services accounts for >60% of Marine sales; we operate through an integrated service framework with three service delivery models

Source: Service call 2024. 1) Q3 2023–Q2 2024; agreement sales include all spare parts and field services sold to vessels under agreement, plus the agreement fee

Moving up the service value ladder in Marine

We increase sales and profits by moving up our service value ladder

From 1x¹⁾

Up to 2-3x¹⁾

Enhanced support agreement

- ✓ Data visibility
- ✓ Operational support
- ✓ Frame agreement for supply of parts and labour

Technical management agreement

- ✓ AI-based Expert Insight
- ✓ Operational support
- ✓ Data-driven dynamic maintenance planning
- ✓ Parts and labour invoiced as orders are received

Optimised maintenance agreement

- ✓ AI-based Expert Insight
- ✓ Operational support
- ✓ Data-driven dynamic maintenance planning
- ✓ Execution with parts and labour included

Guaranteed asset performance agreement

- ✓ AI-based Expert Insight
- ✓ Operational support
- ✓ Data-driven dynamic maintenance planning
- ✓ Execution with parts and labour included
- ✓ Profit sharing, guaranteed performance

1) Sales EUR/kW relative to transactional

growth in sales to agreement
vessels LTM Q2 2024

Source: Service call 2024. LTM - Last twelve months, Q3 2023–Q2 2024; 1) Agreement scope including 4-stroke and 2-stroke engines; Ship Electrical Solutions, Propulsions, Voyage, Exhaust Treatment excluded; GAP - Guaranteed asset performance agreement, OMA - Optimised maintenance agreement, TMA - Technical management agreement, ESA - Enhanced support agreement; figures as per end of June of each year; 2) In MW terms, 4-stroke installed base, excluding QuantiParts

53%

of the fleet is not CII compliant in 2024²⁾

79%

of the existing fleet will not be CII compliant in 2028 if no action is taken²⁾

Tightening regulations and increasing fuel and emission cost will boost demand for retrofits

Total investments in retrofits, including Carbon Capture and Storage solutions (CCS), are estimated to increase significantly over the next decade¹⁾

Propulsion efficiency upgrades	Alternative fuel conversions	Radical power derating	Electrification projects
<p>Propulsion efficiency improvements, e.g., OptiDesign, EnergoFlow, EnergyProFin³⁾</p> <p>700+ vessels contracted</p> <p>20K-1 MEUR per shipset</p>	<p>Engine retrofits to run on alternative fuels on top of conventional diesel</p> <p>10+ vessels contracted</p> <p>3-8 MEUR per shipset</p>	<p>2-stroke power output reduction to optimise efficiency, fuel consumption and emissions at lower speeds</p> <p>30+ vessels contracted</p> <p>5-8 MEUR per shipset</p>	<p>Electrical system⁴⁾ upgrade, including hybrids and shaft generators to improve OpEx, emissions, safety</p> <p>30+ vessels delivered⁵⁾</p> <p>3-8 MEUR per shipset</p>

1) Source: Clarksons; 2) CII (Carbon Intensity Indicator) applies to cargo, RoPax, cruise ships >5 000 GT (with some exceptions); source: Wärtsilä CII tool, correction factors excluded, ships with D or E rating considered as non-compliant; 3) OptiDesign: optimised propeller for actual operating profile; EnergoFlow: pre-swirl stator; EnergyProFin: propeller cap; OptiDesign, EnergoFlow, EnergyProFin can be sold both combined and as stand-alone; 4) E.g., Energy storage system, power distribution, energy management system; 5) Hybrid upgrades

Onboard Carbon Capture and Storage (CCS) allows to capture >70% of the CO2 generated onboard

- ✓ Applicable to all carbon-based fuels, vessels types and sizes
- ✓ Captured CO2 is stored onboard for discharge at port reception facility
- ✓ At our research centre and test facility in Moss, Norway, we simulate vessel installations of onboard carbon capture:
 - Operated for >3 years (since Jan. 2022)
 - CO2 capture capacity: 10 tons/day
 - CO2 capture rate: ~70%
- ✓ First full-scale system operational on LPG carrier "Clipper Eris" in Q4 2024
- ✓ Commercial release in May 2025

Strong growth opportunities in marine based on technology leadership, moving up the service value ladder, and favorable vessel contracting mix

	Equipment	Services
Addressable market	 Favorable vessel contracting mix	 Decarbonisation-driven retrofits
		 Growing installed base
Market share	 Decarbonisation: uptake of alternative fuels and emission reduction technology	 Moving up the service value ladder

Energy highlights

Towards a 100% renewable energy future

Wärtsilä Energy – Key figures LTM Q3/2025

Order intake
2,909 MEUR

Net sales
1,886 MEUR

Energy net sales split LTM Q3/2025

Offering

- Future-fuel enabled grid balancing power plants
- Future-fuel enabled baseload power plants
- Lifecycle services

Key customer segments

- ❖ Utilities
- ❖ Independent Power Producers (IPPs)
- ❖ Industrial customers

As the renewable energy transition accelerates, balancing solutions are key enablers for the transition

Share of renewables in global energy generation

Technology disruption in the energy sector

Renewables becoming main source of power

Gradual replacement of coal

Increased need for balancing solutions

**Development and increasing use of sustainable fuels –
Being enabled for future fuels avoids stranded assets**

Power systems becoming increasingly more complex

1) IEA World Energy Outlook 2023 (Net Zero Emissions scenario)

Source: CMD 2023

Thermal balancer market expected to grow ~28% per year – the baseload market outlook remains stable

Engine power plants

Addressable annual market (GW)

Wärtsilä operating installed base (GW)

1) Forecast based on BloombergNEF forecast on wind and solar capacity additions, and estimated share of balancing capacity compared to renewables growth. Addressable annual market estimates updated on Autumn 2025.

Outlook

- The transition towards renewables is the driving force behind demand for thermal balancing
- We see large balancing market potential e.g. in North America and Europe
- The role of gas as a transition fuel is essential for a secure transition, as highlighted by the IEA
- Future fuels will play an important role, a credible roadmap is essential
- Running hours have remained stable even with the growth of balancing

Source: Service call 2024

Wärtsilä's sweet spot is typically in 50 - 400 MW plants

Engine technologies

High-speed engines

- Low capex and low efficiency
- Best suited for backup and low running hours applications

Wärtsilä medium-speed engines

- High efficiency due to multiple modular units
- Faster start-up; can cycle several times per day with no cost impact
- Transparent modelling shows the value of balancing with engines

Most competitive in applications with high numbers of starts/stops and markets with structures and incentives that reward flexibility

Gas turbine technologies

Aeroderivative gas turbines

- Lower capex than engines but less fuel-efficient
- More flexible than heavy-duty gas turbines (HDGTs)

Open-cycle gas turbines (OCGTs)

- Low efficiency; poorly suited for balancing
- Competitive mainly in peaking applications with low amount of starts/stops

Combined-cycle gas turbines (CCGTs)

- High efficiency, but high capital costs (CAPEX)
- Best suited for large-scale baseload applications

Advantages of Wärtsilä power plants over combined cycle gas turbines

Faster startup time

- Combined cycle gas turbines can take over 30 minutes to start, whereas combustion engine power plants can start and reach full load in less than 5 minutes

Advantages of modularity

- Combustion engine power plants are comprised of multiple generating units

Better part-load efficiency and flexibility

- Unlike gas turbines, Wärtsilä engine power plants have near full range capability of emissions-compliant turndown

Better pulse-load efficiency and profitability

- Combustion engine power plants are dispatchable and can adjust load daily, ramping up and down with demand

Higher ramp rate

- Ramp rate = the rate at which a power plant can increase or decrease output
- Wärtsilä engines can ramp at over 100%/minute. For combined cycle gas turbines, typical ramp rates are around 10%/minute.

Derating due to ambient temperature

- Combustion engines are less sensible to temperature and humidity

Fuel flexibility

- Gas turbines have reduced availability and output when running on fuel oils

Lower water consumption

- A combined cycle gas turbine power plant (CCGT) with a recirculating system = 780 liters/MWh.
- Wärtsilä combustion engine power plant operating in simple cycle on natural gas = 3 liters/MWh.

Case Texas shows future trends. Increasing renewables creates need for balancing with engines outperforming competing technologies

30 million population with **133 GW** of installed power (system size equal to France)

- 7% in annual growth of thermal balancing the last 5 years with expected continued growth
- Growing regulatory support for balancing in Texas
- Wärtsilä installed based (and growing):
 - 1 GW of thermal balancing
 - 1.2 GWh of energy storage

1.6X higher¹ real time market revenue potential for engines vs. gas turbines

Source: S&P Capital IQ Pro, ERCOT (September 2023 data), 1) ERCOT's Security Constrained Economic Dispatch (SCED) data – Wärtsilä study. Data based on average of 2 Aeroderivative gas turbine plants and 2 Wärtsilä engine plants for the full year 2022

Texas as a proofpoint for thermal balancing

- High amount of renewables
- Granular price signals
- Policy support for balancing

Similar conditions forming in:

- Midwestern USA (SPP and MISO)*,
- Australia
- Europe

*SPP = Southwest Power Pool

*MISO = Midcontinent Independent System Operator

Wärtsilä Energy is well positioned to provide the fuel flexibility needed for the energy transition

Technology roadmap for engines

- Plant lifetimes stretching to 2050: **fuel flexibility future-proofs engines**
- There will be **no single global green fuel** for use in the energy sector
- We launched our **100% hydrogen** power plant in Q2 this year, expected to be released for sales in 2025
- 25% hydrogen blend already possible today
- Sustainable fuels come with high conversion losses and should be used **exclusively for balancing** and the decarbonisation of hard to abate sectors
- Using expensive sustainable fuels for inflexible baseload power does not make commercial or environmental sense – leading to a **future advantage for balancing**

Energy Power Plants order intake by fuel, 2020-24 (MW)

- **91%** of engine MW designed for natural gas operation
- Strong upgrade track record, with **140 liquid fuel engines converted to gas** in 18 countries

Source: Engine Power Plants call 2024

The Data Centre power market is shifting, with new thermal baseload opportunities in specific markets

Historical: backup power

20-100 MW

typical power need

Grid interconnections immediately available

- Customer focus: CAPEX, availability
- Segment typically served by high-speed engines
- High risk in case of strict availability guarantees
- Limited lifecycle service opportunity

Emerging: off-grid baseload

50-400 MW

typical power need

Grid interconnection times up to 5-7 years in some markets

- Customer focus: delivery time, OPEX, emissions
- Typically requires medium-speed engines or gas turbines
- Wärtsilä competitiveness high due to shorter lead times, modularity, reliability
- High lifecycle sales potential

US market developing rapidly as baseload is needed while awaiting grid connection

>50%
of all data centres worldwide

>10%
of total electricity consumption in at least 5 US states

\$22 billion
invested in data centres (2023)

Wärtsilä has disclosed three data centre orders – two in the U.S. and one in Europe

Wärtsilä continues growth in the data centre segment with a 507 MW order in the US, offering engines as a reliable power solution

- Wärtsilä will deliver 27 engines to provide continuous primary power for a new data centre under construction in the United States.
- The onsite power facility will operate with 27 Wärtsilä 50SG flexible engines with a power of 507 MW. The engines will run on natural gas and can be converted to run on sustainable fuels in the future.
- The order was booked in Q4 2025.

Wärtsilä engines selected to deliver reliable power for U.S. data centre

- Wärtsilä will supply 282MW of flexible engines to operate a new data centre project in Ohio, USA.
- The onsite power facility, providing power directly to the data centre, will operate with fifteen Wärtsilä 18V50SG engines running on natural gas.
- The order was booked in Q2 2025.

Wärtsilä and AVK collaborate to deliver on-site power generation for data centres

- Wärtsilä and energy solutions business AVK-SEG have signed a cooperation agreement aimed at meeting data centres' unique power requirements.
- Wärtsilä will provide the engineered equipment and maintenance support.
- Wärtsilä and AVK are currently executing energy centre projects in Ireland.
- The agreement was signed in Q2 2024.

Solid services performance continues

Growing Service Net sales

Strong orderbook and book-to-bill

Source: Engine Power Plants call 2024, figures updated as of Q3/2025

+25% total Services sales
2022–LTM Q3/2025

+16% Service agreements sales
2022–LTM Q3/2025

+50% total orderbook
2020–2024

Energy services growth drivers remain solid

- Increasing agreement coverage
- Growing installed base
- Upgrades & sustainable fuel conversion demand
- Growth potential in outcome-based and decarbonisation agreements
- Stable total running hours

Increasing agreement coverage is supporting growth

Anders Lindberg
President, Energy

Our strategic focus to increase lifecycle agreement coverage is generating growth in Energy

Moving up the service value ladder in Energy

We increase sales, profitability and customer satisfaction by moving up the service value ladder

Wärtsilä service value ladder

Sales EUR/kW relative to transactional

Continuous growth in agreement coverage

- Securing service agreements for **new power plants**
- Maintaining **high renewal rate** for existing agreements: >90% renewal rate shows high customer satisfaction
- Increasing the **share of agreement customers** in our installed base: 29% agreement coverage and ~18GW under agreement¹⁾, 3,4GW added since 2021

Moving customers up the service value ladder

- Local presence, global operations, and investments in data & digital solutions enable us to meet high customer expectations
- Higher satisfaction scores for agreement customers that are higher up the value ladder
- Portfolio of **agreements with performance guarantees** is growing: Total 7GW with ~2GW added since 2021

1) Includes agreements covering both installed assets and assets to be installed in the future

Future performance will be driven by strong sales growth and service volumes, continuous improvement, and a future-proof solution portfolio

Recent actions:

- ✓ **New organisational structure and processes:** Updated sales-to-order processes and Business Units with P&L responsibility
- ✓ **Rebalance in risk appetite:** EEQ as the preferred offering, EPC only considered in selected markets
- ✓ **Stronger risk / reward profile:** Legacy projects have been concluded

New build margins

- ✓ New organisation & governance
- ✓ Stronger risk management
- ✓ Operational leverage from growth

Continuous improvement

- ✓ Lean operations and flow efficiency
- ✓ Predictive and autonomous operations
- ✓ Cost indexation & active pricing

New build sales

- ✓ Strong thermal balancing growth
- ✓ Strong energy storage growth
- ✓ Future-proofed portfolio for sustainable fuels and optimisation

Service sales

- ✓ Growing installed base
- ✓ Increasing agreement coverage
- ✓ Climbing the service value ladder

Energy Storage's target market is expected to grow ~13% per annum between 2025-2030

Selected target markets

Addressable annual market (€)¹

Key takeaways

- The need for energy storage systems has grown rapidly and is expected to further increase driven by the energy transition
- Energy storage is critical to meeting the need for energy flexibility
- Wärtsilä Energy Storage's current key markets include Australia, UK and the US
- Selective market expansion targeted to new geographies
- Wärtsilä among top 5 players, new entrants entering the system integration market

Source: BloombergNEF ("BNEF"), S&P Global and Wärtsilä Internal

1) Estimated from BNEF energy storage market outlook. Addressable market excluding certain geographical markets and residential & commercial storage

Source: Energy Storage call April 2025

Strategic priorities to reach Energy Storage's financial targets

- 1 Capture profitable growth in selected target markets**
- 2 Drive product cost reduction through hardware & software development**
- 3 Capture growth in recurring revenue**
- 4 Excel in multisourcing and strengthen regional supply chains**
- 5 Continuously improve our project execution and delivery capabilities**
- 6 Attract, hire and retain high performing talent**

Wärtsilä Energy Storage offering

Our role in the value chain

- Our **core offering** consists of 1) battery energy storage hardware, 2) GEMS Digital Energy Platform, and 3) lifecycle services,
- We are an energy storage **system integrator**, adding value to our customers by providing fully-engineered, end-to-end storage solutions:

- 1 Wärtsilä's energy storage hardware integrates battery modules, Battery Management System and Power Conversion System to a Wärtsilä-designed Quantum enclosure to offer a complete energy storage system (ESS) to our customers.
- 2 Our project execution team manages **full installation and integration** at the customer's site(s).
- 3 Wärtsilä's **GEMS Digital Energy Platform** monitors, controls and optimises storage and other energy assets in the system
- 4 Our **Service+ lifecycle solutions** include Expertise Center support, planned maintenance, performance guarantees and software maintenance

Wärtsilä Energy Storage competitive advantages

Our key differentiators

- **Safety:** Wärtsilä's ESS is designed to meet stringent safety and quality standards (including UL certification for fire safety).
- **Integration and scalability:** Wärtsilä's Quantum is a fully-integrated energy storage solution. Its modular and scalable design enables ease of deployment and optimisation. It integrates storage to other energy assets and to the electricity grid to ensure full utilisation of storage benefits.
- **Reliability and maturity:** Wärtsilä combines 15+ years of proprietary software leadership, top-tier battery energy storage systems, and extensive power sector experience in project execution in all key markets. We are a leading storage integrator globally, with a wide services network, and with a 6.5+ GW / 13+ GWh global portfolio.
- **GEMS and bankability:** With smart optimisation software and complex renewables and grid integration capabilities, our solution ensures the lowest lifecycle costs, the smallest system footprint and new revenue opportunities for our customers – to fully optimise on industry price volatility and demanding transitions in energy.

R&D

We continue investing in innovation to ensure a broad, industry-leading solution offering

* Figure in the comparison period 2021 has been restated to reflect a change in the definition of research and development expenditure.

Industry's most comprehensive offering for decarbonisation

- ✓ Market leaders in 4-stroke medium-speed main engines
- ✓ Industry's fastest and broadest future fuel roadmap
 - ✓ Methanol engines available from 2022 onwards²⁾,
 - ✓ Ammonia engine was launched in Q4 2023,
 - ✓ 100% hydrogen-ready power plant engine technology was launched in Q2 2024
- ✓ Pioneer with the world's first full scale carbon capture solution in 2024 and full commercial release in 2025

1) Biodiesels: FAME – Fatty Acid Methyl Esters, HVO – Hydrogenated Vegetable Oil; 2) Newbuild and retrofits

Q3 2025 development

Operating result and cash flow increased

- Order intake was stable at 1,790 MEUR
 - Marine order intake increased by 8%
 - Energy order intake increased by 29%
- Strong order book of 8,637 MEUR
- Net sales decreased by 5% to 1,632 MEUR
- Comparable operating result increased by 10% to 195 MEUR
 - 11.9% of net sales
- Operating result increased by 20% to 230 MEUR
 - 14.1% of net sales
 - Items affecting comparability amounted to 35 MEUR, mostly related to the divestment of ANCS
- Group service book-to-bill ratio well above one
- Strong cash flow from operating activities of 340 MEUR

Marine market: Moderating demand for newbuilds, still in line with 10-year average

Strong ordering across cruise, containerships and LNG bunkering vessels

- The number of vessels ordered in the review period decreased to 1,200 (1,723 in the corresponding period in 2024, excluding late reporting of contracts).
- The regulatory uncertainty, high newbuild prices and softer market conditions affected negatively the newbuild investment demand in some segments.
- Ordering has been uneven across vessel segments, with continued strong ordering appetite in Wärtsilä's key segments, cruise, containerships and LNG bunkering vessels.
 - Contracting in the Wärtsilä's key segments is expected to remain clearly above the 10-year average level, with latest forecast indicating a 30% increase in contracting volumes between 2025-2027.
- Shipbuilding continues to expand primarily in China.
- In January-September, 259 orders for new alternative fuel capable ships were reported, accounting for 22% (28) of all contracted vessels and 48% (50) of the capacity of contracted vessels.

Vessel contracting trend

Number of vessels (total)

Number of vessels (Wärtsilä's key segments)

Source: Clarksons Research, as per 3rd of October 2025 (+2,000 DWT/GT, including offshore ship-shaped units.) Wärtsilä key segments include LNG carriers, LPG carriers, cruise & ferry, offshore, and special vessels. Historical figures in graphs are on rolling 12-month basis and are subject to change due to late reporting of contracts. The impact is most significant for the latest quarters; therefore, data from the last two quarters is not included. Forecasts are from September 2025.

Energy market: Increased demand drives energy transition investment

The global energy transition continues to move forward

- The IEA expects renewables, grids, and storage investment to post another record high in 2025, and investment in fossil fuels to decrease. BNEF reported that both wind and solar investment grew in the first half of the year compared to H1 2024.
- Energy-related macroeconomic development in 2025 has been heavily impacted by elevated risks in the geopolitical environment.
- In engine power plants, market demand for equipment and services has been strong. Demand for baseload engine power plants is expected to remain stable with further growth opportunities in data centres. The drivers for engine balancing power plants continue to develop favourably.
- In battery energy storage, the demand is closely linked to the increasing share of intermittent renewables in the energy system, which continues to progress strongly. The US market is facing headwinds in the regulatory environment, though several drivers remain solid, with data centres as a potential new opportunity.

Sustainability

We are delivering towards our sustainability targets

On track for our 2030 decarbonisation targets

- ✓ To become **carbon neutral in own operations**
- ✓ To provide a **product portfolio ready for zero carbon fuels**
- ✓ To reduce **suppliers' GHG emissions**

Improving safety, wellbeing and employee engagement

- ✓ **Positive trend in safety indicators**
- ✓ **Wellbeing behaviours & toolkit** launched to support teams
- ✓ **Improving trend in employee engagement**

Strengthening thought leadership and being a responsible company

- ✓ Developing **industry ecosystems** and **co-operation with academia**
- ✓ Continued focus on **ethical compliance**
- ✓ Listed by TIME magazine as **TIME100 most influential companies in 2023** and as one of the **world's most sustainable companies in 2024**.
