Welcome to Wärtsilä

The global leader in advanced technologies and complete lifecycle solutions for the marine and energy markets

In 2015, Wärtsilä’s 19,000 employees generated net turnover amounting to 5 billion euro. The company is active at 200 locations around the globe in some 70 countries and employs people with various backgrounds, levels of education, experience and ambitions. We believe in equal opportunity and personal growth and we support our employees on their personal path at Wärtsilä.

We concern ourselves with advanced technologies that maximise the economic performance of our customers’ ships and power plants in an environmentally friendly manner. Here, the focus is on sustainability, innovation and total return. Consider the development of high-capacity propulsion systems for ships, for example. No other single company can compete with our wide portfolio of products, systems and solutions. Combined with nearly 200 years of knowledge and experience, this makes Wärtsilä a player on the world stage.

TAKE A NEW LOOK AT WÄRTSILÄ

With a virtual reality headset, you can experience Wärtsilä in another dimension - literally. At particular points, indicated by orange pinpoints, you’ll encounter surprising and appealing videos by viewing them with the VR headset.

You can also discover extras without the glasses by scanning the blue pinpoints with your telephone.

An internet connection is required to use the app.

For your own safety, we request that you not walk around while using the VR headset.

WORLDWIDE KNOWLEDGE CENTRE

You may already know it, but Drunen is Wärtsilä’s knowledge centre when it comes to propulsion. The global technology and services centre is located here.

It won’t surprise you that this is also the reason that one of the 10 globally operating Land and Sea Academies is also located here, providing training and education in the latest applications, particularly in the area of propulsion.

“We aim for the most optimum result for our clients.”
Pioneering solutions

Wärtsilä has a great position for profiling from trends in environmental awareness and changing energy demands. We strive for growth by offering innovative, energy-efficient lifecycle solutions and by using our leading position in technological applications as fuel.

WE RUN AHEAD

Regulations in the area of efficient energy use and consumption are becoming increasingly stringent in both the maritime and energy sectors. Wärtsilä ensures that products and services are adapted immediately to new regulations. This allows Wärtsilä to make the difference in comparison to other global players in the sectors in which it operates.

MAKING A DIFFERENCE

The world of power is changing rapidly. Sustainable, energy-efficient products and services are becoming increasingly important. This certainty goes for us as well. We want to make a difference in the worldwide energy transition. For example, our innovative technologies make ship propulsion increasingly more efficient. Wärtsilä is ahead of the pack in making systems that can run on significantly more environmentally friendly Liquefied Natural Gas (LNG). And we are accelerating our digital approach to the maritime industry.

As a manufacturer, we are unparalleled in turning data into valuable recommendations. We don’t report deviations in the data, but go much further by indicating which components have problems and what has to be done with them. Together with our subsidiary Eniram, we offer an extremely complete range of “performance optimisation services”. We now have condition-monitoring services for the most important products, along with services to optimise the performance of ships. We call these Genius services. With our Online Services, customers can also gain insight into their own data themselves.

PASSION TO PERFORM

Wärtsilä is a proud and involved global player that provides its employees every opportunity to grow professionally and personally. Wärtsilä cherishes the dedication and passion of employees who work hard every day to improve their craftsmanship. We believe in the power of diversity within our company - in terms of gender, culture, background, education and more. Every individual, every experience, everyone’s contribution is valuable and ultimately results in the best and most sustainable result for the customer.

Wärtsilä’s headquarters is in Helsinki, Finland. Wärtsilä has 200 locations, eight of which are in the Netherlands. In total, nearly 19,000 people work at the company, nearly 10,000 in the Netherlands.

You come up with the most advanced solutions if you’re continually prepared to face a customer’s challenge with an open mind. We also work as efficiently as possible and with an entrepreneur’s attitude. This way, every Wärtsilä employee contributes to the best answer to customer demand.

- Wärtsilä has been in both the Netherlands and around the globe for nearly 200 years.
- No other company can match our portfolio of products, systems and solutions.
- Wärtsilä roots are in Finland.

Our expertise

Wärtsilä is subdivided into marine solutions, energy solutions and services with various product business lines. The business lines indicated in orange are represented in Drunen.

MARINE SOLUTIONS

Wärtsilä enhances the business of its marine and oil & gas industry customers by providing innovative products and integrated solutions that are safe, environmentally sustainable, efficient, flexible, and economically sound. Being a technology leader, and through the experience, know-how and dedication of our personnel, we are able to create customer solutions that provide optimal benefits to our customers around the world.

SERVICES

Wärtsilä Services supports its customers throughout the lifecycle of their installations by optimising efficiency and performance. The company’s service network of approximately 11,000 professionals in 160 locations is unmatched in the industry, delivering services to more than 12,000 customers every year. The portfolio of services – from spare parts to complete operational, maintenance and optimisation services – is constantly being developed, not only to improve the availability of customers’ installations, but to support them in growing their businesses. Wärtsilä is committed to providing high-quality, expert support and the availability of services in the most environmentally sound way possible, wherever, whenever.

ENERGY SOLUTIONS

Wärtsilä Energy Solutions is a leading global supplier of ultra-flexible power plants of up to 600 MW operating on various gaseous and liquid fuels. Our portfolio includes unique solutions for baseload, peaking, reserve and load-following power generation, as well as for balancing intermittent renewable energy. Wärtsilä Energy Solutions also provides utility-scale solar PV power plants, as well as LNG terminals and distribution systems. As of 2016, Wärtsilä has 62,298 installed powerplant capacity in 176 countries around the world.

We now have condition-monitoring services for the most important products, along with services to optimise the performance of ships. We call these Genius services. With our Online Services, customers can also gain insight into their own data themselves.
The Netherlands has a long history, of course, in ships and shipbuilding. From 1939 through 2010, the former LIPS company produced ships' propellers. In the early 1990s, the company was acquired by John Crane and in 2003, the company was then sold to Wärtsilä.

**.... to Wärtsilä these days**

- In addition to the Drunen location, there are now seven other Wärtsilä locations in the Netherlands.

  They work for both Dutch and Belgian customers, and worldwide. For example, the locations in Schiedam, Kruiningen (Quantiserv) and Harlingen focus primarily on serving customers optimally with questions about products, custom made solutions, service contracts, maintenance and parts. Rotterdam is the location for Wärtsilä SAM Electronics. Our services are directed close to the customer, from the heart of the Rotterdam Harbour. Zwolle is home to the office that focuses on energy solutions for Africa and Europe. The subsidiary Quantiserv is also located in Zwolle and provides parts and knowledge for the so-called ‘classic’ engine brands from Wärtsilä. The worldwide central logistics for Wärtsilä, highly automated, is run from the location in Kampen.

The maritime markets in which we are active

Integrated solutions

Wärtsilä’s unique capabilities in harnessing innovation and digitalisation form the basis of our support for our customers as we enter a new age of shipping. It is no longer always enough to provide individual products or systems. Since the essential global need for optimal efficiency and minimal risks demand that all these individual parts function together, as a single, integrated, harmonious entity. When Wärtsilä talks about connecting the dots, the integration of all the various elements that go into producing the most efficient and cost-effective operational performance is central to this concept.

No other company can match our portfolio of products, systems and solutions. It is this vastly broad offering, together with our almost 200 years of know-how and experience that makes Wärtsilä so very capable in producing the best and most efficient integrated solutions. This single-supplier capability speeds and eases the design and procurement process, facilitates accurate and on-time logistics, and reduces project development and execution risks for shipyards and owners.

Examples of our propulsion specialities under one roof

IN THE TECHNOLOGY & SERVICES CENTRE IN DRUNEN
Wärtsilä has set out its visions for the future of the shipping industry. The work on future visions has been prompted by the inevitable effect that growing global energy demand and increasingly stringent environmental legislation to combat climate change will have on the shipping sector. Additionally, Wärtsilä assesses various emerging trends, such as sharing economies, new business models enabled by the new digital universe, the huge growth in energy storage capacity, and new affordable ‘green’ energy sources, since they represent both challenges and opportunities for the future of shipping.

"We accept the challenges created by the developments currently taking place. Wärtsilä is increasing its speed of re-invention; not just internally but in cooperation with our customers and partners, so that the industry can be assured of having the technologies ready and available to meet the new requirements", says Roger Holm, President, Wärtsilä Marine Solutions.

In its "Visions of Future Shipping" papers, Wärtsilä presents different scenarios that could shape the way that shipping companies operate in the future. These scenarios have each been identified under different names, as follows:

**CONVOY**

By taking advantage of advanced controls and communication between autonomous components, systems, and vessels, shipping fleets could be operated in convoys. The fuel savings created by vessels closely following each other result from the lower entrance speed of water ahead of the aft vessel. By optimising the operations significant fuel reductions could be achieved.

Furthermore, through the use of system autonomy, artificial intelligence, and advanced connectivity, it is envisioned that the trailing ships could be operated with fewer crew members. Advanced communication technologies will also rapidly increase the sharing of information, which will save time and optimise the allocation of cargo to vessels.

**ZERO - Floating Distribution Hubs**

Another scenario could be to have artificial islands along the main shipping routes producing emissions free fuels from solar or wind for powering green energy sources. Clean energy production is becoming a global priority, and its influence on the shipping industry is expected to be felt more and more within the near future.

**Exerco - Unlimited Energy Storage**

Large investments will alter energy storage using battery technology. Wärtsilä believes that battery energy density will increase substantially during the coming years. This will allow ships to operate in sensitive areas silently and with no exhaust emissions.

**Z3 - Green Energy**

To provide reliable, emission free power without upfront investment, highly reliable energy sources and monitoring from the shore through advanced connectivity will be required. This concept enables the supply of energy for propulsion on an "as you go" basis.

**LIITOS - Working together**

For efficient cargo sharing, access to the same information by all global operators would ensure, for example, that no container ship sails cargo free. This sharing of assets could be achieved by use of a digital tool.
Propulsion products
WHAT ARE THOSE?

The propeller

Worldwide knowledge and training centre in the area of propulsion

The Wärtsilä location in Drunen has both a European and a global function in the organisation. This is the location for the Technology & Services Centre (T&SC), specialised in propulsion. This centre is a worldwide authority in the area of high-value maritime technology.

The focus is primarily on assisting customers throughout the entire lifespan of their installation. To do this, we advise our customers (concerning new ships, but also after commissioning), perform product development and design and read out and analyse data, among other things. In addition to the departments that focus exclusively on the core business, there are also various support departments located in Drunen.

In addition to the Technology & Services Centre, there is also the Land & Sea Academy, where various training courses and educational programmes are offered.

Discover Drunen
Worldwide knowledge and training centre in the area of propulsion

On the Wärtsilä grounds, the following safety and health regulations apply to both our employees and to our visitors. We expect you to read, understand and use these regulations. We therefore ask that you please read the text below carefully.

- Reception
- Information Management (ICT support)
- Meeting rooms
- Canteen

Visitors have access to the ground floor. The other floors are reserved exclusively for employees. Visitors who are given special access for this can go to the other floors as long as they are accompanied by a Wärtsilä employee.

WWW.WARTSILA.COM/ENCYCLOPEDIA

Want to dive deeper into the world of Wärtsilä? We have a beautiful, extensive online encyclopaedia to enthuse you from A to W (for Wärtsilä, of course. And, yes, it goes to Z).
Wärtsilä Marine Solutions offers a range of products in the area of mechanical and electrical propulsion. The products are designed as optimally as possible, with an eye to both daily operation and to environmental impact. The products provide efficient fuel consumption and, by reducing emissions, Wärtsilä enables its customers to operate throughout the world.

At Propulsion, three product groups can be distinguished:

— Thrusters & Propulsion Control Systems
— Propellers & gears
— Navy & Waterjets

Wärtsilä is building a comprehensive digitalised approach which optimises operations and enables growth together with our customers. Digitalised services create value as digitalisation improves safety, transparency, availability, efficiency, revenue increase and eventually growth – not only for Wärtsilä but our customers and partners too.

Together with Eniram, a Finland-based technology company providing the marine industry with energy management and analytics solutions, we offer a wide range of performance optimisation services to reduce fuel consumption and emissions. From single onboard applications for trim, speed and engine optimisation to comprehensive fleet analysis. Through the acquisition of Eniram Wärtsilä takes a solid lead in marine digitalisation.
Propulsion System Services wants to support its customers throughout the entire lifespan of their installations. This sometimes starts at an early stage, during the first discussions with customers. And it doesn’t stop after commissioning: we keep supporting our customers until the end of their installation’s operational life. This means that we feel responsible and that we take full responsibility instead of simply delivering parts or sending a maintenance specialist to make a quick fix to a problem. Over the course of time, we have introduced new products and services to increase the efficiency, reliability and safety of the ships that are in operation.

Propulsion System Services offers a gamut of services, including:

- Delivery of original spare parts
- Propeller repair
- Worldwide field service
- Overhaul of all propulsion systems
- Refit fitting controls
- Replacing tunnel thrusters, steerable thrusters and controllable pitch propellers
- Propeller improvement package
- Underwater repair of propellers and seals
- Delivery of spare sub-assemblies, such as underwater removable parts, lower gearboxes and hubs.

The Product Management within Services is a strategic and tactical function that aligns with and operates through the network of stakeholders to maintain or improve the commercial performance of services products. In Propulsion System Services the Product Management department is enhanced with additional functions such as Strategic Alliances, Innovation and Product Development, Sales Development and Pricing.

Land & Sea Academy

An overview of the range of training courses:

- Variable-pitch propellers (including control systems)
- Gearboxes
- Seals, Bearings & Propeller shaft guides
- Steerable thrusters (including control systems)
- Transverse thrusters (including control systems)
- Water jets (including control systems)
- Propulsion Control System retrofit
- Propulsion training for shipyard employees
- Dual-fuel engines
- Engine operation UNIC C2/C3
- Electro-technical & Automation
- Propulsion Condition Monitoring Service (PCMS)

One of Wärtsilä’s ten specialised Land and Sea Academies is located in Drunen. Training and education are offered here (internal and external) in the area of the maintenance and operation of engines, propulsion systems, electrical systems and control systems. The 1300 m² building has all of the facilities: modern training rooms and resources, test rooms and simulators. Training courses can be custom designed for the customer - both in terms of content and where and how the training course can be taken. This can be done at the Academy itself in Drunen or on board at the customer’s location.
Keep it safe together

The safety of our employees and of our guests is always paramount. By following the instructions below, we can jointly safeguard everyone’s safety.

The following regulations concerning the health and safety of both our employees and our visitors apply on the Wärtsilä grounds. We expect you to use these regulations. Therefore, please read the text below carefully.

- +31 (0)88 980 4333 Emergency number
- Should you encounter any unsafe situation, notify your Wärtsilä contact person of this.
- Upon arrival, you must register at the reception desk as a visitor. You will then receive a visitor’s pass. We request that you wear this visibly. Upon departure, you must log out and return the badge.
- We request that you follow the instructions of corporate emergency responders in the event of an emergency. You can recognise these employees by their fluorescent jackets.
- When taking stairs, hold onto the banister.
- Don’t use the elevator during emergencies.

Safety instructions in the Land & Sea Academy practical training room.

Safety resources
- Throughout the hands-on training activities, the use of safety shoes and overalls is mandatory.
- In addition, when working with hydraulic tools, the use of safety goggles and gloves is mandatory.

Hoisting
- Visitors may not use machines - e.g. cranes - without the help and supervision of the instructor.
- Never walk under a suspended load.
- Never hoist a load above people.

Walking paths
- Use only those doors and paths intended for pedestrians.
- Be aware of rolling forklifts and bridge cranes.
- Pay attention to where you walk. The floor may be uneven.

During practical training sessions, wearing the following PPE is mandatory at the trainer’s instruction:

- Hearing protection required in certain areas
- Safety shoes Mandatory
- Safety goggles Mandatory
- Work overalls are mandatory.
