

Qassim Cement Company, Saudi Arabia

Added value with Operations
& Maintenance agreement

Qassim cement in Saudi Arabia has a clear goal: to become the most efficient cement company in the region. But how did they turn this vision into reality? Their first step was building a 52 MW power plant to reduce dependence on the external grid. However, this brought a significant challenge: operating the plant efficiently while maintaining high reliability. In 2013, Qassim cement signed an Operations & Maintenance (O&M) agreement with Wärtsilä, entrusting us with day-to-day operations, preventive and predictive maintenance, manpower management, and health and safety. With a tailored agreement designed specifically for Qassim cement's needs, we've consistently delivered on performance guarantees, ensuring the plant operates efficiently and reliably, empowering Qassim cement to focus on their core business: manufacturing cement.
