

Stay Sulphur Cap compliant with annual servicing for Wärtsilä's gas analyser and water monitoring products

Sulphur Cap compliance is an ongoing challenge. Just like any onboard machinery, Exhaust Gas Treatment systems should be monitored regularly to ensure they are working in top condition.

To ensure your scrubber complies with class requirements, including IMO Resolution MEPC.259(68) regulation – and avoid potentially costly port authority fines – it is essential to keep your system well maintained.

Wärtsilä Exhaust Treatment offers a superior package of equipment-specific annual maintenance and calibration for Continuous Emission Monitoring System (CEMS) and Water Monitoring (WM).

Our certified engineers can perform the necessary calibration and maintenance services at all ports around the world, at a fixed service price.

Keep an eye on your Exhaust Gas Treatment system and keep an eye on compliance. For more information, please contact ET.LCS@Wartsila.com.
