

CYBER PROTECTION

WÄRTSILÄ ICS VULNERABILITY ADVISORY

With new cyber vulnerabilities being discovered on an almost daily basis, timely reports about those that affect your critical operational technology (OT) systems and devices will help you to improve security and support uninterrupted operations. The Wärtsilä ICS vulnerability advisory service provides notifications and guidance on threats and vulnerabilities for specific OT assets along with actionable recommendations to control and mitigate them.

KEY BENEFITS

- Stay up to date on the latest threats and vulnerabilities
- Receive actionable recommendations on how to protect your OT installation against current threats
- Choose the relevant controls and mitigating actions related to the identified vulnerabilities
- Gain a deeper understanding about the status of your OT system
- Reduce your cyber security-related risks

STAY ONE STEP AHEAD

With the Wärtsilä ICS vulnerability advisory service, Wärtsilä cyber security experts monitor new vulnerabilities and threats affecting selected OT components and systems. We work with you to identify which Wärtsilä and non-Wärtsilä OT assets will be monitored by the service based on their criticality. You will be then notified about new threats and receive regular reports about the vulnerability status of the selected systems along with actionable advice on how to maintain their security.

SCOPE OF SUPPLY

The Wärtsilä ICS vulnerability advisory service is suitable for any critical OT asset and is included in the Cyber protection module of Wärtsilä Cyber services. Delivery includes vulnerability advisory reports with information and recommendations on identified vulnerabilities affecting critical OT systems and devices.

Although we provide recommendations and risk remediation suggestions, the Wärtsilä ICS vulnerability advisory service does not implement the needed changes – these controls and mitigating actions can be provided through other Wärtsilä Cyber services.

WÄRTSILÄ CYBER SERVICES

Wärtsilä Cyber services help you to understand the cyber security status of your operational environment and mitigate identified risks. We use a systematic approach, from assessing your current cyber posture to implementing appropriate cyber controls and lifecycle services.
