Wärtsilä Konnect
B2B solution

Wärtsilä Konnect B2B solution is a Wärtsilä Application programming interface (API) that enables you to send requests for quotations and purchase orders from your procurement system to Wärtsilä SAP and vice versa to receive quotations and order acknowledgements from Wärtsilä.

By using Wärtsilä Konnect you can work more efficiently with spare parts coordination and procurement. When your procurement system is integrated with Wärtsilä SAP, the amount of manual data entry is reduced, leading to shorter processing times and reducing the risk of human typing errors. This gives your purchaser and Wärtsilä spare part coordinator time for other more value adding tasks.

QUICKER, BETTER AND AUTOMATED PROCUREMENT WITH WÄRTSILÄ KONNECT

- Eliminates manual data entry in the spare part procurement process
- Reduces cost per transaction
- Connects with your existing system
- No operative costs.

TECHNICAL CONCEPT

Wärtsilä Konnect is an API that provides an endpoint to receive requests for quotation and purchase order documents via http(s) from your system or application in order to process them in Wärtsilä SAP. The solution also supports sending the quotation and order response back from SAP to you. Wärtsilä Enterprise Service Bus (built on webMethods) was used to develop this end-to-end solution.

SETTING UP WÄRTSILÄ KONNECT

Your procurement system needs to be integrated with Wärtsilä to exchange order documents. The documents are exchanged in the maritime e-commerce MTML format. Setting up Wärtsilä Konnect is simple and we will provide you with technical documentation and support you with connection testing.
